"Both an exhaustive survey of many cultures over a period of three thousand years, and a thoughtful application of sociological discipline to the history of medicine, Medical History of Contraception is a fascinating introduction to the era of *Humanae Vitae*. Sociologist Norman Edwin Himes (Ph.D. Harvard, 1932) researched problems of population, birth control, and marriage and family relations. His Medical history of contraception tracks the development of birth control from antiquity to the 1930s; the text was reprinted in 1963 and in 1970. Note: Citations are based on reference standards.
